

LIVWATER

EMPOWERING COMMUNITIES THROUGH
HOLISTIC WATER SOLUTIONS

WWW.LIVWATER.IO

SETTING NEW STANDARDS IN **WATER RE-USE.**

LIVWATER

WWW.LIVWATER.IO

The background of the entire slide is a close-up, high-contrast photograph of water ripples. The water is a deep, dark blue, and the ripples create a complex, organic pattern of light and shadow, giving it a textured, almost abstract appearance. The lighting is dramatic, with bright highlights on the crests of the waves and deep shadows in the troughs.

INTRODUCTION

THE WATER PROBLEM

OUR FOCUS

THE **LIVING** *DIFFERENCE*

OUR SOLUTIONS

CLIENT JOURNEY

INDUSTRIES WE SERVE

SUSTAINABILITY

Welcome To

LIVWATER

At **LIVWater** we strive to revolutionise water management through the **integration of renewable technologies and smart water reuse solutions**. With the implementation of our advanced decentralised water treatment and supply solutions, we ensure communities thrive in harmony with nature.

We provide clients with direct access to a curated portfolio of exclusive, best-in-class water technologies through key industry partnerships. This access, alongside our Living Water Fund (LIVFund) helps to set us apart. Ensuring every project benefits from world-class innovations supported by both local and international expertise.

WE TAKE CARE OF IT ALL

- Civil Planning & Council Approvals
- Environmental Impact Assessments
- Borehole, Water Testing & Licensing
- **Full Water Treatment Solution Installation**
- **Water Metering Devices, Invoicing, and Billing**
- Operation & Maintenance: Electricity, Servicing, and Parts

SETTING NEW STANDARDS IN
WATER RE-USE.

CLOSED LOOP CYCLE REJUVENATION

At the heart of our approach lies the establishment of a closed-loop water reuse system. By continuously recirculating treated water within our system, we minimise water loss and ensure that every drop is utilised to its fullest potential.

THE WATER PROBLEM

South Africa is consistently ranked among the 30 driest countries globally, facing a pressing water shortage. By 2030, the projected water shortfall is 17% unless major interventions are made.

Global Average Household Consumption
173 litres per person per day

SA Average Household Consumption
218 to 237 litres per person per day

THE OUTCOMES

Municipal System Input: **4.39 bn m³**

Infrastructure investment gap

REQUIRES R90 BN/YEAR;

only R17–R69 bn is allocated

17%

Projected National Water
Deficit by 2030

LIVWATER

MUNICIPAL WATER LOSS

Water leaks and wastage in the distribution system

40.8%

OUR FOCUS

DECENTRALISED WATER SOLUTIONS

Our vision is to decentralise water supply solutions to reduce dependence on centralised municipal supply. This approach enables us to tailor our products and services to the specific water treatment needs of consumers. Through decentralisation, we minimise water losses during distribution and ensure localised access to clean water.

ADVANCED TECHNOLOGY

Our strategic partnerships with industry leaders grant us access to advanced technology, driving innovation and enabling us to become market leaders.

By continuously cultivating and expanding these alliances, we are well-positioned to meet future challenges and seize emerging opportunities.

CLOSED LOOP REJUVINATION

Water Reuse Systems provide a consistent source of water that is less dependent on variable weather patterns and climate conditions. By recycling water locally, communities can reduce their vulnerability ensure a steady supply for various uses.

LIVE WATER METERING & LEAK DETECTION

Our Smart Water Management model offers a comprehensive strategy for sustainable water use. By combining Live Water Metering with Advanced Leak Detection Systems, we provide a holistic solution that addresses both usage efficiency and loss prevention.

WHAT SETS US APART

THE **LIVING** DIFFERENCE

We deliver Water as a Service (WaaS), redefining traditional water supply models and setting a new standard for sustainability and innovation. Unlike conventional water providers, we offer a comprehensive solution that encompasses everything from civil planning to ongoing maintenance.

With innovative ownership models, cutting-edge technology, transparent pricing, and a focus on community empowerment, **LIVWater** ensures reliable access to the purest, safe water while promoting environmental stewardship and long-term cost savings.

Liv+ Member

Lower than Council

99.95% Clean

Water Metering and Leak Detection

Up to 80% Savings

Security, Backup & Pressurised Supply

Alternative supply, stable delivery, backup storage & user experience

We help to ensure water remains available when the conventional network fails or becomes unreliable. We do not only improve whether water is available, but how well it is delivered. Consistent pressure and supply improve user experience, system efficiency, and perceived asset quality.

Savings

Lower cost of water and stronger long term financial performance

The financial case is not only about using less water. It is about paying for water more intelligently, reducing losses, and improving infrastructure efficiency over time. We turn water from an uncontrolled operating cost into a managed and optimised utility input.

Water Quality

Purest water, compliance, and user confidence

Clients gain greater assurance that the water they use is of the highest quality, suitable for various applications and professionally managed. Quality assurance supports health, compliance, customer confidence, and operational integrity.

Sustainability and Strategic Positioning

Carbon value, green positioning, financing potential, and market credibility

We help clients move from a reactive utility strategy to a credible resilience and sustainability strategy. Water infrastructure becomes a strategic asset that supports funding, reputation, compliance, and long term value creation.

OUR SOLUTIONS

EXCLUSIVE PARTNERSHIPS & TECHNOLOGY ACCESS

By partnering with **LIVWater**, you gain exclusive access to transformative technologies, delivered with the assurance of seamless integration and trusted stewardship.

OUR ADVANTAGE

Exclusive Representation

We have secured distribution and sales rights for select global technologies across Africa.

Patented Innovations

Including the ModMBR™ Membrane Bioreactor (Patent ZA202407281) and other proprietary systems.

Global-Local Collaboration

Partnerships with international leaders combined with African engineering expertise.

End-to-End Integration

All partner technologies are delivered, operated, and serviced directly by LIV, under a single accountable contract.

WE TAKE CARE OF IT ALL

SAVE & EARN WITH **LIVREUSE**

LIVReuse is a full turnkey suite of products designed to minimise the volume of new water introduced into the system. We have carefully selected the best technology and partners to lead the way with water reuse solutions.

UP TO 80% OF WATER SAVINGS

Closed Loop Cycle Rejuvenation

Modular, Scalable & Flexible Water Treatment Solutions

A **turnkey approach** that integrates the entire process of **water treatment, distribution and management**.

LIVSUPPLY

SECURE, PRESSURISED & INDEPENDENT WATER SUPPLY

LIVSupply is designed for households, estates, businesses, communities, and industries seeking uninterrupted access to safe, sustainable, and premium-quality water. Our solutions combine advanced treatment technologies with renewable energy integration, ensuring reliability even in the most challenging environments.

What's Included

- High-Tech Filtration Technology
- Backup Storage Tanks
- Pressurised Supply (Pump System)
- Product & Service Guarantees
- Sans241 Compliance
- Water Licenses
- Water Star Rating Certified
- Service Level Agreement
- Solar Panels & Battery Systems (Optional)

LIVWATER

LIVWASTE

ONSITE WASTE TREATMENT

LIVWaste provides innovative, on-site wastewater treatment solutions that ensure water is treated responsibly, sustainably, and in full compliance with environmental standards.

The mission is clear: to transform wastewater from a burden into a resource. By applying advanced treatment technologies, modular system design, and renewable energy integration, **LIVWaste** empowers clients to reduce their environmental footprint, secure long-term water resilience, and **unlock opportunities for reuse and recycling**.

TECHNOLOGY PLATFORMS

LIVSMART

SMART WATER MANAGEMENT

In most **LIV**Smart implementations, 4 distinct technology layers are used to structure how data flows and how systems interact from physical devices up to business applications.

This separation helps organisations manage scale, performance, flexibility and security in digital implementation stacks.

What's Included

Ultrasonic Meters

M Bus devices

DLMS compliant meters

Pressure sensors

Flow sensors

Level sensors

Smart valves

Pump status relays

Pulse interfaces for legacy meters

Mobile | Desktop Dashboard

Layer 1: **Field Devices**

Layer 2: **Communication Infrastructure**

Layer 3: **Hosting & Dashboard View**

INDUSTRIES WE SERVE

Industrial & Commercial

High-load treatment,
compliance guaranteed

Residential & Estates

Safe, decentralised treatment
with reuse options

Hospitality & Tourism

Eco-friendly sewage solutions
for resorts & lodges

Educational & Healthcare

High-load treatment,
compliance guaranteed

Mines & Remote Camps

Rugged containerised units
for off-grid deployment

Municipalities

Scalable systems for peri-
urban & rural settlements

Client Journey

We go beyond just selling systems.

THE LIVING DIFFERENCE |

SUSTAINABILITY & STRATEGIC POSITIONING

Sustainability Value for Clients

1. ESG performance improvement
2. reduced municipal dependency
3. lower environmental footprint
4. water stewardship

Green Building Certifications

1. Green Star
2. LEED
3. EDGE

Carbon and sustainability value

Reduced energy for bulk water supply. Municipal water supply requires energy for:

1. Abstraction
2. Treatment
3. Long distance pumping
4. Storage and distribution

Investor & Lender Benefits

1. Improved financing attractiveness
2. Lower long term operational risk
3. Stronger sustainability credentials

Strategic Value for Developments

Developers increasingly integrate decentralised water infrastructure because it provides:

1. Water security
2. Infrastructure independence
3. Future tariff protection
4. Environmental credibility
